The present sequence is that of the heavy chain variable region of antitumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb) TWV148 [8] was produced by site-directed mutagenesis of TWV148 [8] was produced by site-directed mutagenesis of TWV148 [8] (see AAM51170), replacing residue Pro-94 with a germline Ser. TWV148 was (see AAM51170), replacing residue Pro-94 with a germline Ser. TWV148 was containing number of the man mabs produced from a GenTVV fusion using splean cells from a hybrid mouse containing human variable and constant region antibody transgenes that was immunised with human TWP alpha. The human mabs bound immobilised human TWP alpha with high avidity and had a totally human 1970; kappa isolated human, primate, rodent, ammunian, chimeric, humanised and/or complementarity determining region (CDR) -grafted anti-TWP burded and advantants, as well as anti-TWP antibody compositions, and variants, as well as anti-TWP antibody compositions, or compositions, devices, transgenic animals, transgenic composition in a cell, tissue, organ or animal (daimed) such as the matchodies may inhibit TWF induced cell adhesion molecules, inhibit TWF binding to receptor, or provide Arthritic Index improvement in a mouse model. They are useful for dispons given in the pressent celea AAM51161-6.

63). The antibodies may inhibit TWF-induced cell adhesion molecules, inhibit TWF binding to receptor, or provide Arthritic fordisp

TW148. TW148 was 1 of 8 human mabs produced from a GenTNV fusion using spleen cells from a hybrid mouse containing human variable and constant region antibody transgenes that was immunised with human TWF alpha. The human mabs bound immobilised human TWF alpha with high avidity and had a totally human IgG1, kappa isotype. They showed relatedness to each other and to the human germline DP-46 heavy chain sequence (see AAM51167). The invention provides isolated human, primate, rodent, mammalian, chimeric, humanised and/or complementarity determining region (CDR)-grafted anti-TWF antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TWF antibodies, immunoglobulins, cleavage products and other specified portions of formulations, devices, transgenic animals, rand mathods of making and using them. The anti-TWF antibody compositions, formulations, devices, transgenic animals, transgenic plants, and mathods of making and using them. The anti-TWF antibody composition of making and using them. The anti-TWF antibody composition of making and using them. The anti-TWF antibody composition of making and using them of the CDRs of the composition molecules, inhibit TWF binding to receptor, or provide Arthritic Index improvement in a mouse model. They are useful for diagnosing or treating a TWF related condition in a cell anaemia, diabetes, a cardiovascular disease such a starioral arthritis, at the respection and a cardiovascular disease such as arterioral and a starioral a starioral and a such order or a cardiovascular disease such as a starioral and a starioral a starioral a starioral and a starioral and a such order or a cardiovascular disease such a starioral and a starioral a starioral a starioral a starioral a starioral a starioral and a stario
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  myocardial infarction, an infectious disease in a cell such as bacterial, viral, and fungal infections, pneumonia, leproy and malaria, a malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's lymphoma and multiple myeloma, or a neurological disease such as multiple sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease and Creutzfeldt-Jakob disease. TNV148 may be especially useful as an
tumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 QVQLVESGGGVVQPGRSLRLSCAASGFIFSSYAMHWVRQAPGNGLEWVAFMSYDGSNXKY

The present sequence is that of the heavy chain variable region of antitumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb) crumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb) crumour necrosis from a hybrid mouse containing human variable and constant splen cells from a hybrid mouse containing human variable and constant region antibody transgenes that was immunised with high avidity and had a cotally human 1951, kappa isotype. They alpha with high avidity and had a cotally human 1961, kappa isotype. They showed relatedness to each other and to the human germline DP-46 heavy chain sequence (see AAMS1167). The invention provides isolated human, primate, rodent, mammalian, chimeric, humanised and/or complementarity determining region (CDR)-grafted anti-compositions and variants, as well as anti-TNF antibody. Graylementary nucleic acids, vectors, host cells, compositions, formulations, devices, transgenic animals, transgenic compositions, formulations, devices, transgenic animals, transgenic compositions, formulations and variants.

Compositions and variants a well as anti-TNF antibody, compositions, formulations of making and using them. The antibody vectors, host cells, compositions of making and using them. The antibodies may inhibit role in variable regions given in the present sequence and in AAMSI165, or ather all of the CDRs of the light chain (see AAMSI161-CC 3). The antibodies may inhibit rNF induced cell adhesion molecules, inhibit TNF binding to receptor, or provide Arthritic Index improvement in a mouse model. They are useful for diagnosing or treating a TNF relumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, a caltiovascular disease such myccardial infarction, an infectious disease in a cell such as bacterial,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated mammalian anti-tumor necrosis factor antibody, useful for treating sickle cell anemia, diabetes, atherosclerosis, restenosis, angina pectoris, myocardial infarction, leprosy.

The present sequence is that of the heavy chain variable region of antitumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb) TNN196 was 10 of 8 human mAbs produced from a GenTNV fusion using spleen cells from a hybrid mouse containing human variable and constant region antibody transgenes that was immunised with human TNF alpha. The human mAbs bound immobilised human TNF alpha with high avidity and had a totally human igG1, kappa isOtype. They showed relatedness to each other and to the human germline DP-46 heavy chain sequence (see AAMS1167). The invention provides isolated human, primate, rodent, mammalian, chimeric, humanised and/or complementarity determining region (CDR) grafted anti-TNF antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TNF antibody compositions, complementary nucleic acids, vectors, host cells, compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TNF antibody compositions, complementary nucleic acids, vectors, host cells, compositions, formulations of an immunoglobulin molecule, sequence and in AAMS1165, or either all of the CDRs of the heavy chain and/or light chain variable regions given in the present sequence and in AAMS1165, or either all of the CDRs of the heavy chain and/or light chain variable regions given in the present sequence and in AAMS1165, or either all of the CDRs of the heavy chain and condition in a cell, tissue, organ or animal (claimed) such as theumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, crohn's characterics are accepted and parthritis, and parthritis are accepted arthritis and parthritis are accepted arthritis and parthritis and parthritis are accepted and parthritis and parthritis and parthritis and parthritis are accepted and parthritis and parthr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as arteriosclerosis, atherosclerosis, restenosis, angina pectoris or myocardial infarction, an infectious disease in a cell such as bacterial, viral, and fungal infections, pneumonia, leprosy and malaria, a malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's lymphoma and multiple myeloma, or a neurological disease such as multiple sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated mammalian anti-tumor necrosis factor antibody, useful for treating sickle cell anemia, diabetes, atherosclerosis, restenosis, angina pectoris, myocardial infarction, leprosy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the heavy chain variable region of antitumour necrosis factor (TNF) human recombinant monoclonal antibody (mAb) TYN14. TWN14 was 1 of 8 human mAbs produced from a GenTNV fusion using spleen cells from a hybrid mouse containing human variable and constant region antibody transgenes that was immunised with human TNF alpha. The human mAbs bound immobilised human TNF alpha with high avidity and had a totally human IgG1, kappa isotype. They showed relatedness to each other and to the human germline DP-46 heavy chain sequence (see AAM51167). The

the mainstead and/or complementarity determining region (CDR) grafted anti-
compositions and variants, as well as anti-TWF antibody compositions,
concoding or complementary nucleic acids, vectors, host cells,
concoding or complementary nucleic acids, vectors, host cells,
compositions, formulations, devices, transgenic animals, transgenic
compositions, formulations, devices, transgenic animals, transgenic
compositions, formulations devices, transgenic animals, transgenic
compositions, formulations devices, transgenic animals, transgenic
compositions, formulations devices, transgenic animals,
compositions, formulations of makings and using them. The anti-TNF antibody
composition in and/or light chain variable regions given in the present
composition in AAMSILISS, or either all of the CDRs of the heavy chain
(see AAMSILISS-60) or all of the CDRs of the light chain (see AAMSILIS).

Composition in AAMSILISS, or either all of the CDRs of the heavy chain
composition in a cell, tissue, organ or animal (claimed) such as
condition in a cell, tissue, organ or animal (claimed) such as
arteriosclerosis, atherosclerosis, restenosis, angina pectoris or
compocardial infarction, an infectious disease in a cell such as bacterial,
compocardial infarction, an infectious disease in a cell such as bacterial,
compocardial infarctions, pneumonia, leprosy and malaria, a malignant
compocardial infarctions, or a neurological disease such as multiple
compocardial disperses or a neurological disease and a malignant or animal compocardial disperse and and malaria, a malignant or all and published to the compocardial disperse and an early and the compocardial disperse and an entry or animal compoca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGN-YYYYGMDVWGQG 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                    The present invention describes a human heterodimeric antibody (I) (fragment) having a binding affinity of at least 1x10-8 M to the protective antigen of Bacillus anthracis or a molecule involved in anthrax infection that blocks binding of the antigen or molecule to receptors, edema factor and lethal factor. (I) has virucide and antibacterial activities, and can be used in immunotherapy. The antibodies (I) are useful as anti-toxins or anti-infectives with respect to infective agents, such as anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis virus (VEBV), or West Nile virus (WND). The present sequence represents a human heterodimeric antibody heavy chain variable region amino acid sequence, which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ï

The present invention describes a human heterodimeric antibody (I) (fragment) having a binding affinity of at least IX10-8 M to the protective antigen of Bacillus anthracis or a molecule involved in anthrax infection that blocks binding of the antigen or molecule to receptors, edema factor and lethal factor. (I) has virucide and antibacterial activities, and can be used in immunotherapy. The antibodies (I) are useful as anti-toxins or anti-infectives with respect to infective agents, such as anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis virus (VEEV), or West Nile virus (WND). The present sequence represents a human heterodimeric antibody heavy chain variable region amino acid sequence, which is used in the exemplification
                                                                                                                                                                                             New human heterodimeric antibodies or their antibody fragments, useful as anti-toxins or anti-infectives with respect to infective agents, e.g. anthrax, botulinum, smallpox, Venezuelan equine encephalomyelitis or West
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

comprises administering an antibody or antibody fragment that binds to a comprises administering an antibody or antibody fragment that binds to a molecule involved in anthrax infection and which has the ability to block the binding of the molecule to at least one of a cell receptor, PA63, edecamining exposure to B. antiracis comprises assaying a sample for the presence of a molecule selected from cell receptors, PA63, PA63 heptamer, PA83, edema factor or lethal factor with an antibody that has binding a faffinity for the molecule, where the presence of elevated levels of the antibody correlates with the presence of elevated levels of the cantibody to a cell receptor. PA63, PA63, PA63 heptamer, PA83, edema factor or lethal factor with a secondary antibody having binding affinity for the antibody, where the presence of elevated levels of the scondary antibody correlates with the presence of elevated levels of the scondary antibody correlates with the presence of elevated levels of the secondary antibody correlates with the presence of Elevated levels of the secondary antibody correlates with the presence of Elevated levels of the secondary antibody correlates with the presence of Elevated levels of the secondary antibody and a light chain sequence of Elevated levels of the secondary antibody and a light chain lambda region selected from a group of sequences ADV86815 and a light chain lambda region selected from a group of sequences ADV86815. The second sequences ADV86815 and a light chain lambda region selected from a group of sequences ADV86815. The sesent invention are also useful for producing anticoming or anti-infectives to infective agents such as antirax, botulinum, smallpox, venezuelan equine encephalomyelitis and west Nile virus. The compositions of the present invention are also useful for producing and the sequence is that of the heavy chain variable region elected from a group of sequences and pA83. Phage libraries were developed from mand padd and pA83. Phage libraries padd and pA83. Phage libraries 
                                                                                                                                                                                 Treating an animal with anthrax infection by administering an antibody to the protective antigen of Bacillus anthracis, and blocking binding to cell receptors, edema factor or lethal factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    against anthrax. The libraries were panned against PA83 and PA63, and sequence analysis was performed on positive responders. Neutralization of anthrax toxin activity by purified Fabs was demonstrated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGN--YYYYGMDVWGQ 118

The present invention describes a protein comprising an immunoglobulin (1g) heavy chain variable (VH) domain and an Ig light chain variable (VL) domain. The protein binds a complex comprising a major histocompatibility complex (MHC) and a peptide, does not substantially bind the MHC in the absence of the bound peptide, and does not substantially bind the peptide in the absence of the MHC. The peptide is a peptide fragment of gp100, MUC1, TAX or hTERT. Also described: (1) a pharmaceutical composition comprising the novel protein and a carrier; (2) a cyctoxic T cell comprising one or more nucleic acids for expressing the Ig that binds a comprising an MHC and a peptide, does not substantially bind the peptide in the absence of the bound peptide, and does not substantially bind the comprising a first segment that encodes the Ig variable domain; (4) a host cell comprising hererologous nucleic acid sequences that encodes the protein; (5) a transgenic animal whose genome includes heterologous nucleic acid sequences that encode the protein; (6) identifying the protein that specifically binds the MHC. Peptide complex; (7) expressing an antigen-binding protein; (8) abbating or killing a target cell that displays a peptide on a surface MHC molecule; (9) treating or preventing a concerous disorder in a subject; and (10) detecting an MHC-peptide composition for treating or preventing a composition be needed to the new of the invention has cytostatic and MHC-peptide composition for treating or preventing a composition for treating or preventing a composition for preventing a composition for the period of an antibod which because the provention and composition for the period of an antibod which because the period of an antibod of an antibod of an antibod of a period of a period of an antibod of an antibod of an antibod of a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New protein comprising an immunoglobulin heavy chain variable (VH) domain and an immunoglobulin light chain variable (VL) domain, useful for preparing a composition for treating or preventing a cancerous disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGNYYYYGMDVWGQGT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of identifying binding site domains (BSD) that retain the capacity of binding to a predetermined epitope when positioned C-terminal of at least one further domain in a recombinant bicor multivalent polypeptide. The method comprises (a) testing a panel of the SDD displayed on the surface of a blological display system as part of the subject of the surface of a blological display system as part of the fusion protein for binding to a predetermined epitope, where the fusion protein comprises an additional domain positioned N-terminal of the BSD and an amino acid sequence that mediates anchoring of the fusion protein to the surface of the display system; and (b) identifying a BSD that to binds to the predetermined epitope. The method is useful to identify bicor multivalent polypeptides that comprise antibody binding sites capable of efficiently binding to the corresponding antigen. The polypeptides or antibodies identified by the method are useful therapeutically and antibodies identified by the method are useful therapeutically and flagments that bind independently of their position within bifunctional single-chain fusion proteins can be isolated from combinatorial antibody libraries using the new in vitro method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Phage display system for identification of binding site domains retaining capacity to bind an epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGN-YYYYGMDVWGQG 119

```
This is the amino acid sequence of the human D4.5 heavy chain variable region, used in the method of the invention. for providing receptors that can be used for targeting antigens in humans without being immunogenic themselves. Such receptors can be used for treating diseases such as tumours or auto-immune diseases, graft rejection after transplantation, infectious diseases by targeting cellular receptors as well as allergic, inflammatory, endocrine and degenerative diseases by targeting key molecules involved in the pathological process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Production of anti-human antigen receptors - by selecting a combination of functionally rearranged VH and VL immunoglobulin chains expressed from a recombinant vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 ADSVKGRFTISRDNSKNTLYLOMNSLRAEDTAVYYCARDRGIAAGGN-YYYYGMDVWGQG 119

The invention relates to a method of treating tumorous disease by administering a human immunoglobulin specifically binding to the human epithelial cell adhesion molecule (EpCAM) also termed as 17-1A antigen, KSA, EGP40, GA733-2, ks 1-4 and esal antigen. The immunoglobulin exhibits a serum half-life of at least 15 days and is administered no more composition comprising anti-EpCAM are useful for treating tumorous disease, such as breast cancer, epithelial cancer, hepatocellular carcinoma, cholangiocellular cancer, stomach cancer (melanoma), a cancer of the urogenital tract (e.g., ovarian cancer, endometrial cancer, carcin cancer, and kidney cancer), lung cancer, gastric cancer, a cancer of the small intestine, liver cancer, pancreas cancer, and cancer of the cancer of the bile duct, esophagus cancer, gall bladder cancer, a cancer of the thyroid gland. The present sequence is the human anti-EpCAM immunoglobulin heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating tumorous disease, such as breast, colon, prostate, liver, skin, ovarian, cervical and lung cancer, by administering a human immunoglobulin specifically binding to the human epithelial cell adhesion molecule (EpcAM) antigen.
                                                                                                                                       pancreas tumor;
                                                                                                                                 Antibody therapy; tumor; cancer; cytostatic; neoplasm; pancreas tumor; ovary tumor; thyroid tumor; stomach tumor; breast tumor; epithelial cancer; hepatocellular carcinoma; cholangiocellular tumor; head & neck tumor; win tumor; melanoma; uterine cancer; uterine cervix tumor; renal tumor; lung tumor; intestine tumor; liver tumor; gallbladder carcinoma; esophagus tumor; immunoglobulin; antibody; epithelial cell adhesion molecule; heavy chain.
                                                                                                Human anti-EpCAM immunoglobulin heavy chain, SEQ ID NO: 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Quadt C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 12; SEQ ID NO 1; 23pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Prang N,
                                                                                                                                                                                                                                                                                                                                                                                                                  13-FEB-2004; 2004US-00778915.

```

The patent discloses heterominibodies which are multifunctional compounds produceable in a mammalian host cell as a secretable and fully functional thererodiner of two polypeptide chains, where one of the polypeptide chains chains comprises, a CHI-domain (constant domain of an immunoglobulin chain) and the other chain (constant domain of an immunoglobulin light chain). The polypeptide chains further comprise, can immunoglobulin light chain). The polypeptide shaving chain the constant domains at least two (poly) peptides having different receptor or ligand functions, where further at least two of the different (poly) peptides lack an intrinsic affinity for one another and are linked via the constant domains. The heterominbodies have cytostatic, immunostimulatory, antileukaemia and antiproliferative cytostatic, immunostimulatory, antileukaemia and antiproliferative cytostating malignant cell growth related to malignancies of haematopoietic cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas, cellance of present sequence is the left chain of an elanomas and sarcomas. The present sequence is the left chain of an elanoma and sarcomas. The present sequence is the left chain of the certain inflammatory cytokine granulocyte/macrophage colony stimulating factor (GM-CSF), plus a hexahistidine sequence for ease of purification. CHD70 screption (CHD70 screption) antigen

produceable in a mammalian host cell as a secretable and fully functional beterodimer of two polypeptide chains, where one of the polypeptide chains comprises a CLT-domain (constraint domain of an immunoglobulin heavy chain) and the other chain comprises CL-domain of an immunoglobulin hight chain). The polypeptide chains further comprise, can immunoglobulin light chain). The polypeptide chains further comprise, clused to the constant domains at least two (poly)peptides having different receptor or ligand functions, where further at least two of the different receptor or ligand functions, where further at least two of the clifferent receptor or ligand functions, where further at least two of the different receptor or ligand functions, where further at least two of the clifferent (poly)peptides lack an intrinsic affinity for one another and are linked via the constant domains. The heterominibodies have cytostatic, immunostimulatory, antileukaemia and antiproliferative activities. These compounds can be used for diagnosing, preventing and treating malignant cell growth related to malignancies of haematopoietic cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas, melanomas and sarcomas. The present sequence is the right chain of a heterominibody comprising HD70 single-chain Fv (scFv) fragment N-cerminally linked to human Ck domain (constant domain of immunoglobulin-kappa light chain) which bears at its Cterminus the human inflammatory cytokine interleukin-2 (III-2). HD70 scFv specifically recognises the human epithelial cell adhesion molecule (BpCAM) also called 17-1A antigen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGNYYYYGMDVWGQGT 120
                                                            201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for recating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEKZ93 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

B;Title: Diversity of immunoglobulin heavy chain gene segment rearrangement in B lymphoc
A;Reference number: A49028; MUID:92008140; PMID:1915549
                                                                                                                                                                                                                                                                                                                   A; Accession: A49028
A; Status: preliminary
A; Molecule type: mRNA
A; Molecule type: manuaglobulin to MOBI backbone (NCBIN: 64471, NCBIP: 64470)
C; Superfamily: immunoglobulin to manuaglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F;15-98/Domain: immunoglobulin homology < NMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A;Cross-references: UNIPARC:UPI000011663F; EMBD:231686; NID:g509782; PIDN:CAA83491.1; PI C;Superfamily: immunoglobulin V region; immunoglobulin homology C;Keywords: heterotetramer; immunoglobulin F;15-98/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             phage by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ig heavy chain V region - human C; Species: Homo sapiens (man) C; Species: Homo sapiens (man) C; Species: 27-Jan-1995 #sequence_revision 27-Jan-1995 #text_change 20-Jun-2000 C; Accession: S46390 R; Figini, M; Marks, J.D.; Winter, G.; Griffiths, A.D. Ig heavy chain V region - human (fragment)
C;Species: Homo sapiens (man)
C;Accession: 831679
R;Cuisinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.
Submitted to the EMBL Data Library, June 1992
A;Description: Mechanisms that generate human immunoglobulin diversity operate from the A;Reference number: 831585
A;Accession: 831679
A;Accession: 831679
A;Accession: L14 «CUI»
A;Residues: 1-134 «CUI»
A;Residues: 1-134 «CUI»

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

Amino acid sequence of the variable region of a human mu chain:
location of a possible JH segment.";
Proc. Natl. Acad. Sci. U.S.A. 77:3239-3243(1980).
-!- MISCELIANBOOUS: This mu chain was isolated from the plasma of patient with macroglobulinemia.
-!- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
TILE REFERENCE: 09596-4202
CURRENT APPLICATION NUMBER: US/09/848,798
CURRENT FILING DATE: 2001-05-04
PRIOR APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 60/028,550
PRIOR APPLICATION NUMBER: EARLIER PILING DATE: 1996-10-11
NUMBER OF SEQ ID NOS: 224
SOFTWARE: PALCHER PILING DATE: 2001-05-05
SEQ ID NO 26
LENGTH: 126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGNYYYYGMDVWGQGT 120

Patent No. 685913

Patent No. 685914

Patent No. 685915

GENERAL INFORMATION:

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TURRENT FILING DATE: 2010-05-04

CURRENT APPLICATION NUMBER: US/09/848,798

CURRENT PILING DATE: 2010-05-04

PRIOR FILING DATE: EARLIER FILING DATE: 1999-01-29

PRIOR FILING DATE: EARLIER FILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

SOFTWARE: PATENTIN OF SEC ID NOS: 224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 ADSVKGRFTISRDNSKNTLYLQMNSLRAEDTAVYYCARDRGIAAGGNYYYYGMDVWGQGT 120
